SUSTAINABLE DEVELOPMENT GOALS

Roadmap Report of the department highlighted the action plan of A. H and Veterinary Department for above goals.

Key issues of Veterinary Service Delivery in Assam, suggested guiding principles and service models.

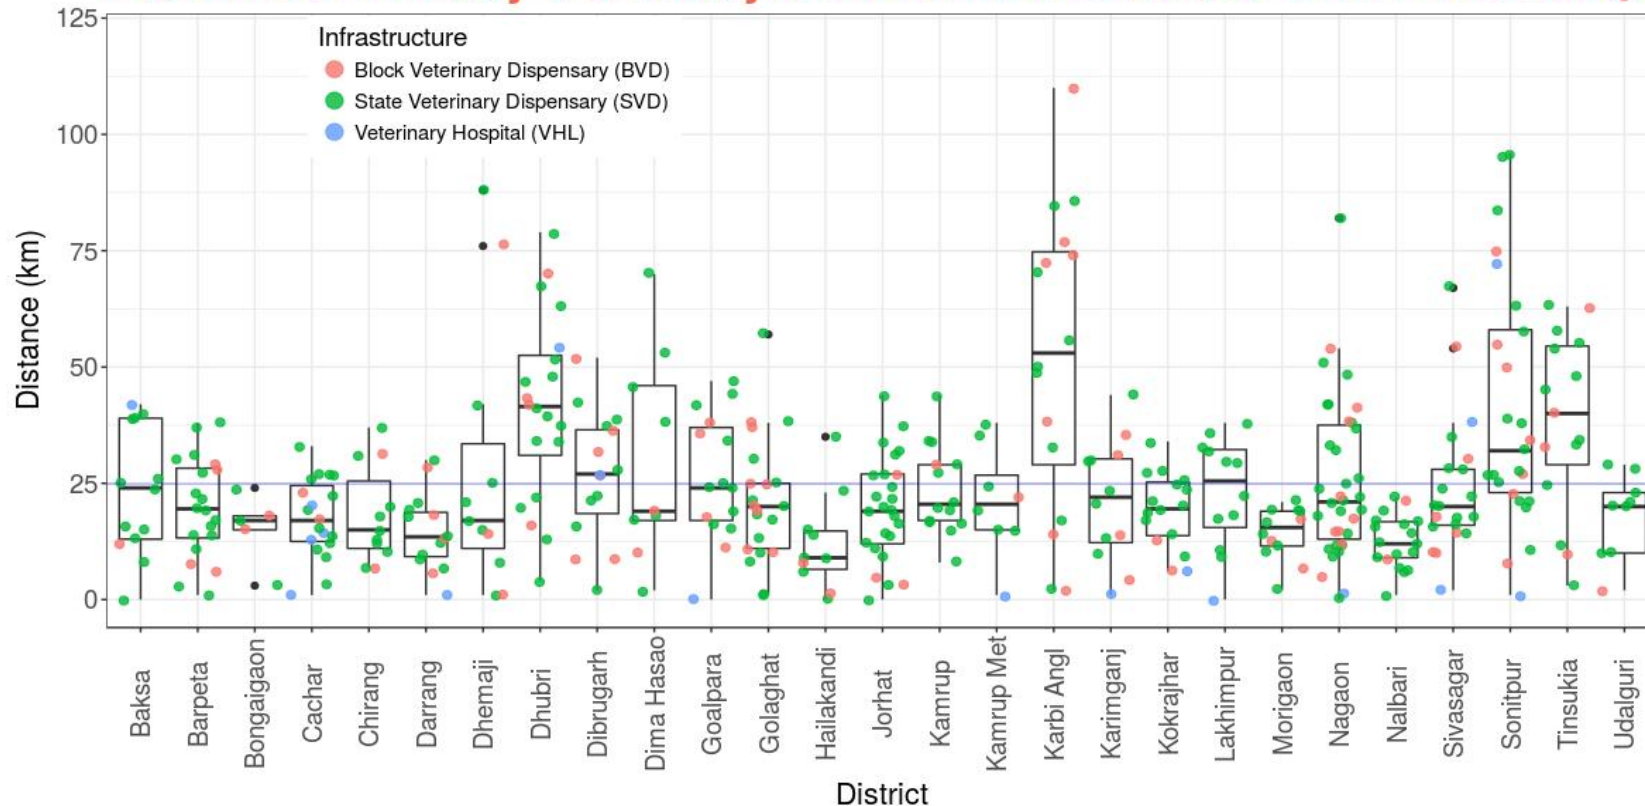

Last mile problem of service delivery

1

Distance of Primary Veterinary Service Infrastructures from District HQs

The state average of the aerial distance of a PVSIs -primary veterinary service infrastructure (SVD / BVD / VH) from district HQ is 25 km. There is hardly any PVSIs beyond 100 km.

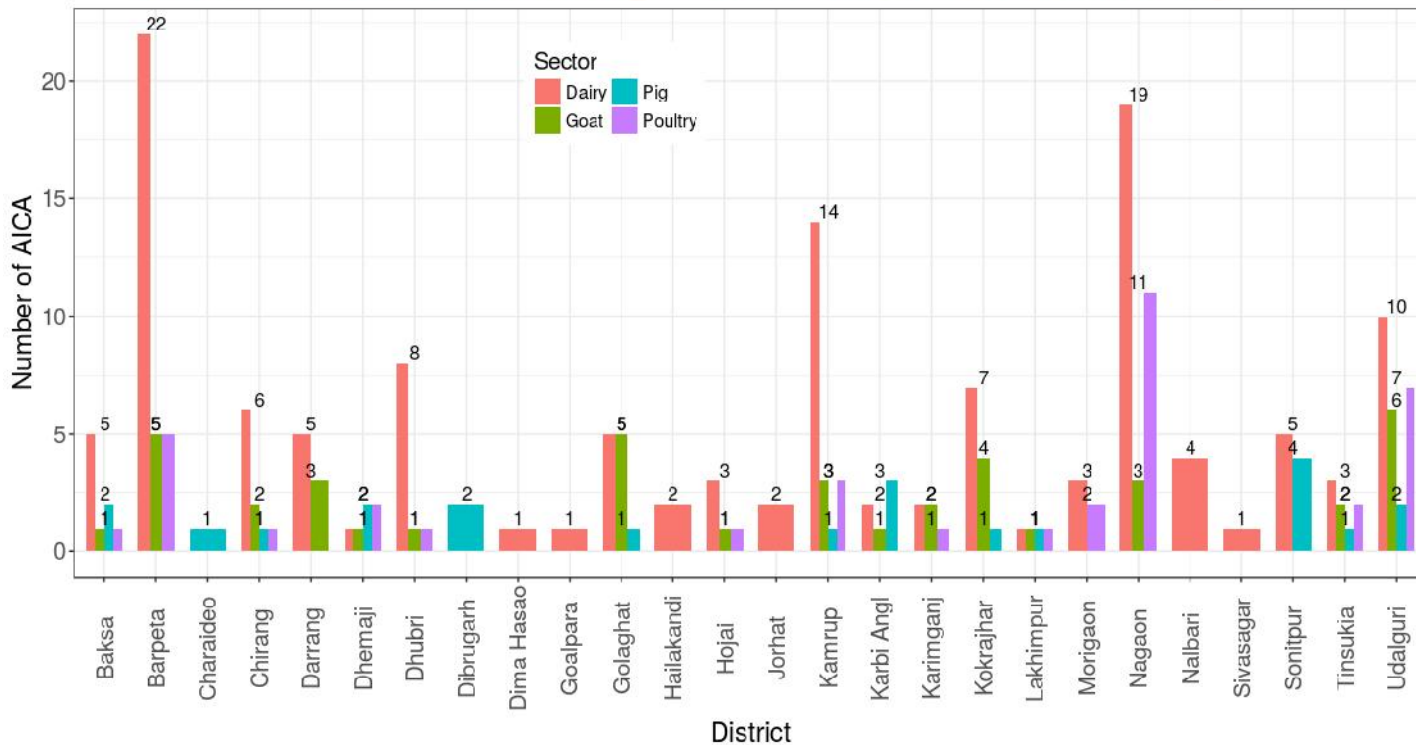

Poor Targeting and delivery of need-based services thereof.

2

CLUSTERS

District wise Areas showing Interest in Commercial Activity (AICA)

Analysis based on approximate geotagging of addresses of 7095 commercial units collected from various sources with majority (5000+) being one supported under various government schemes between 2006-2017. Only 2612 (37%) farms belong to various AICA (places with >5 farms).

Discontinuous Service or limited follow up

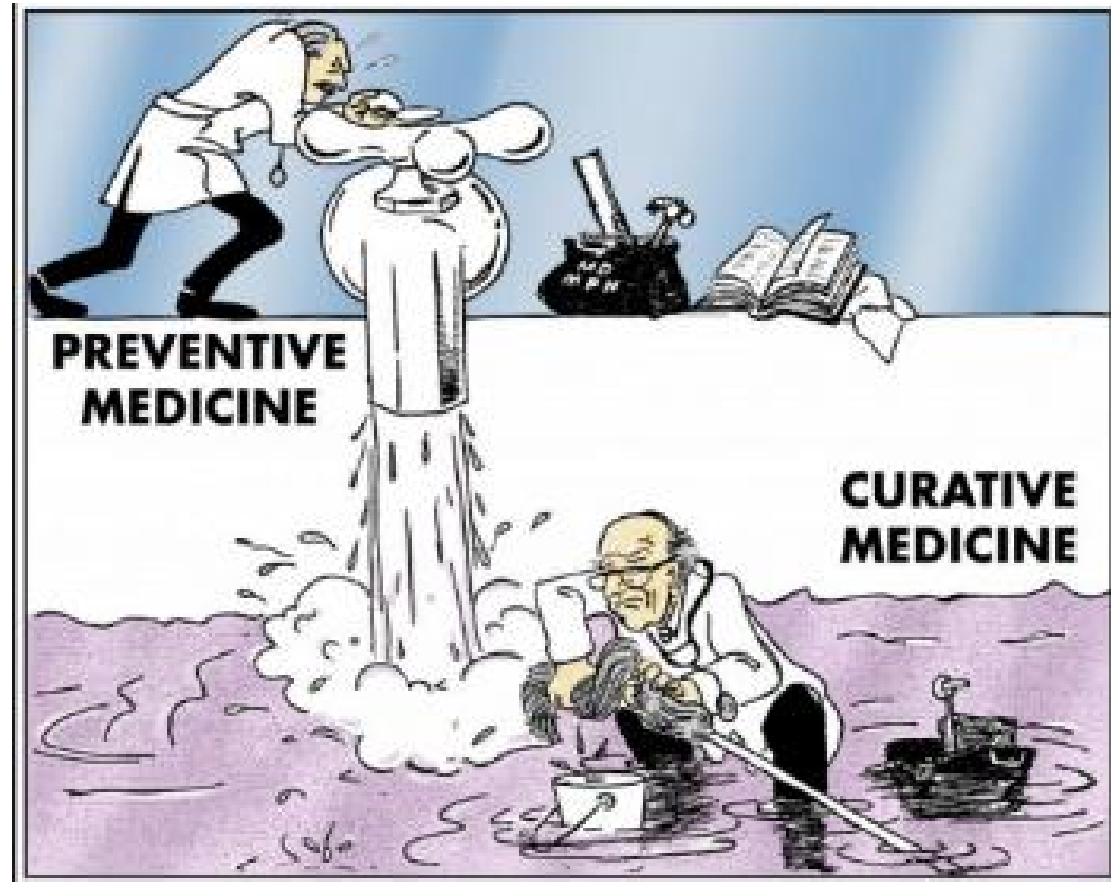

3

Predominance of curative focus

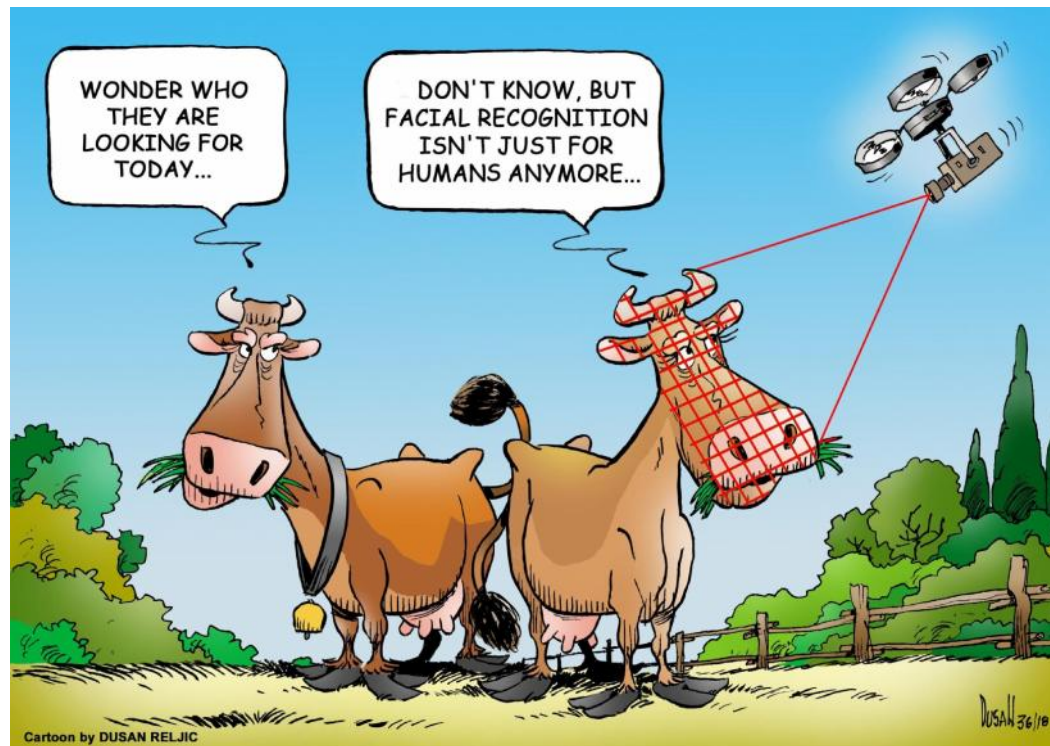

4

Inadequate focus on herd health monitoring / productivity linked services.

5

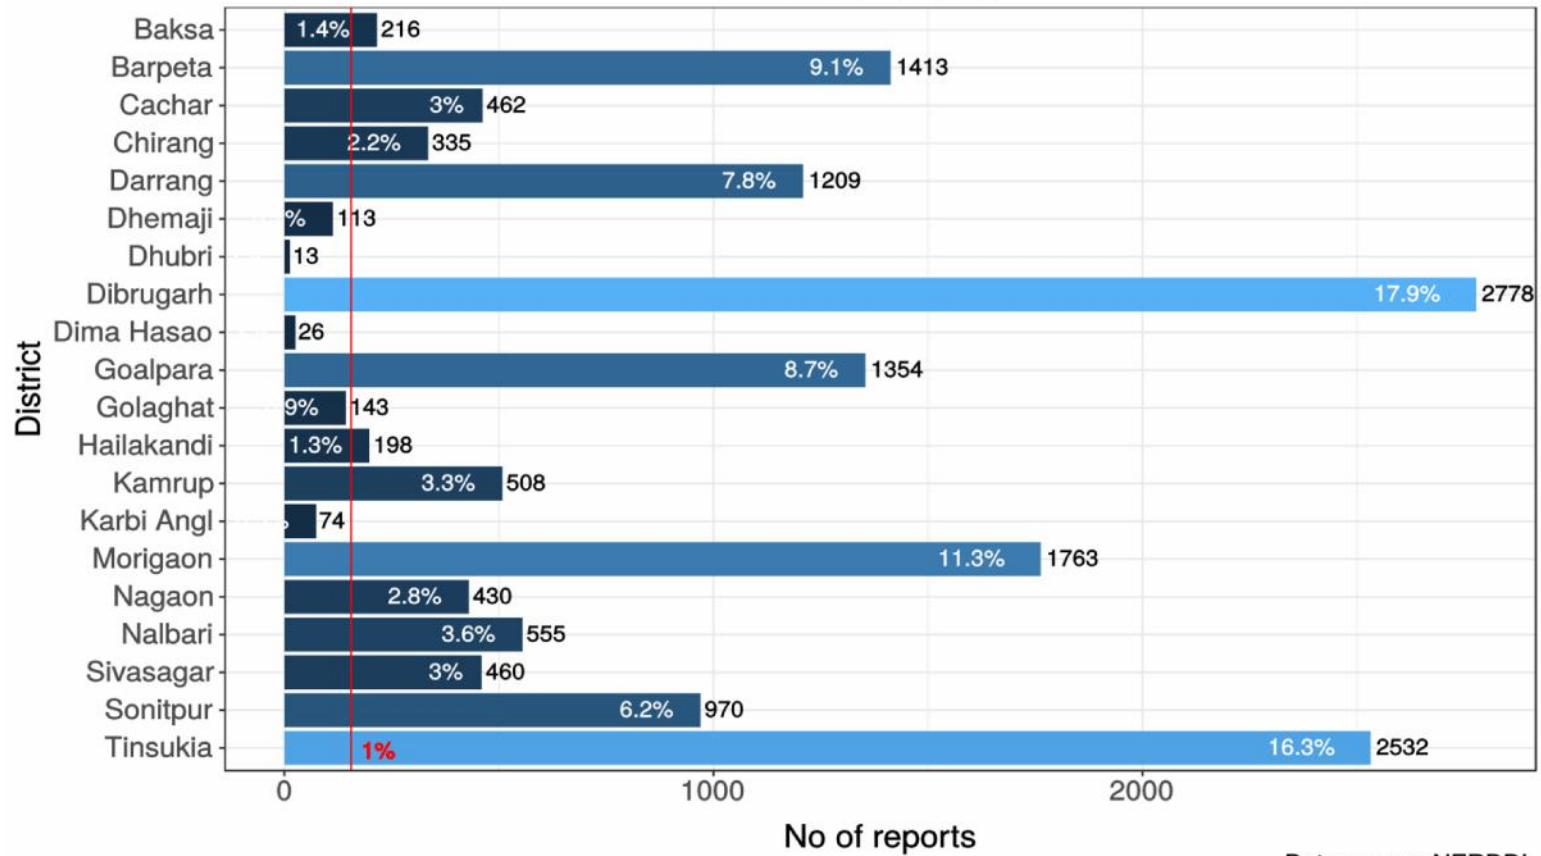

Poor reporting of diseases

6

"YOU SHOULD HAVE CALLED ME SOONER."

District wise Disease Outbreak Reporting (2016 - 2017)

Suggested Model for Service Delivery.

Services for non-cluster areas:

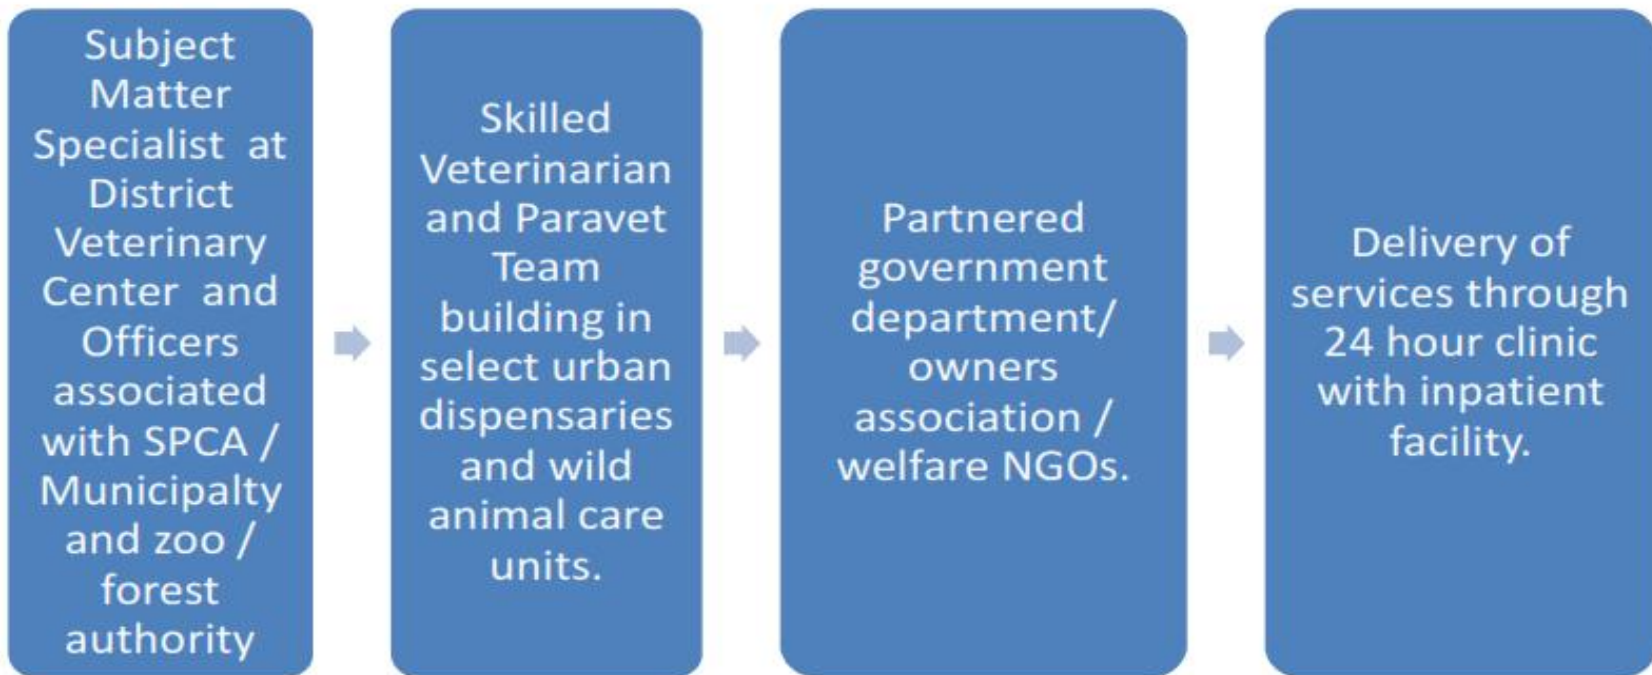

Suggested Model for Service Delivery.

Services model for production clusters:

Suggested Model for Service Delivery.

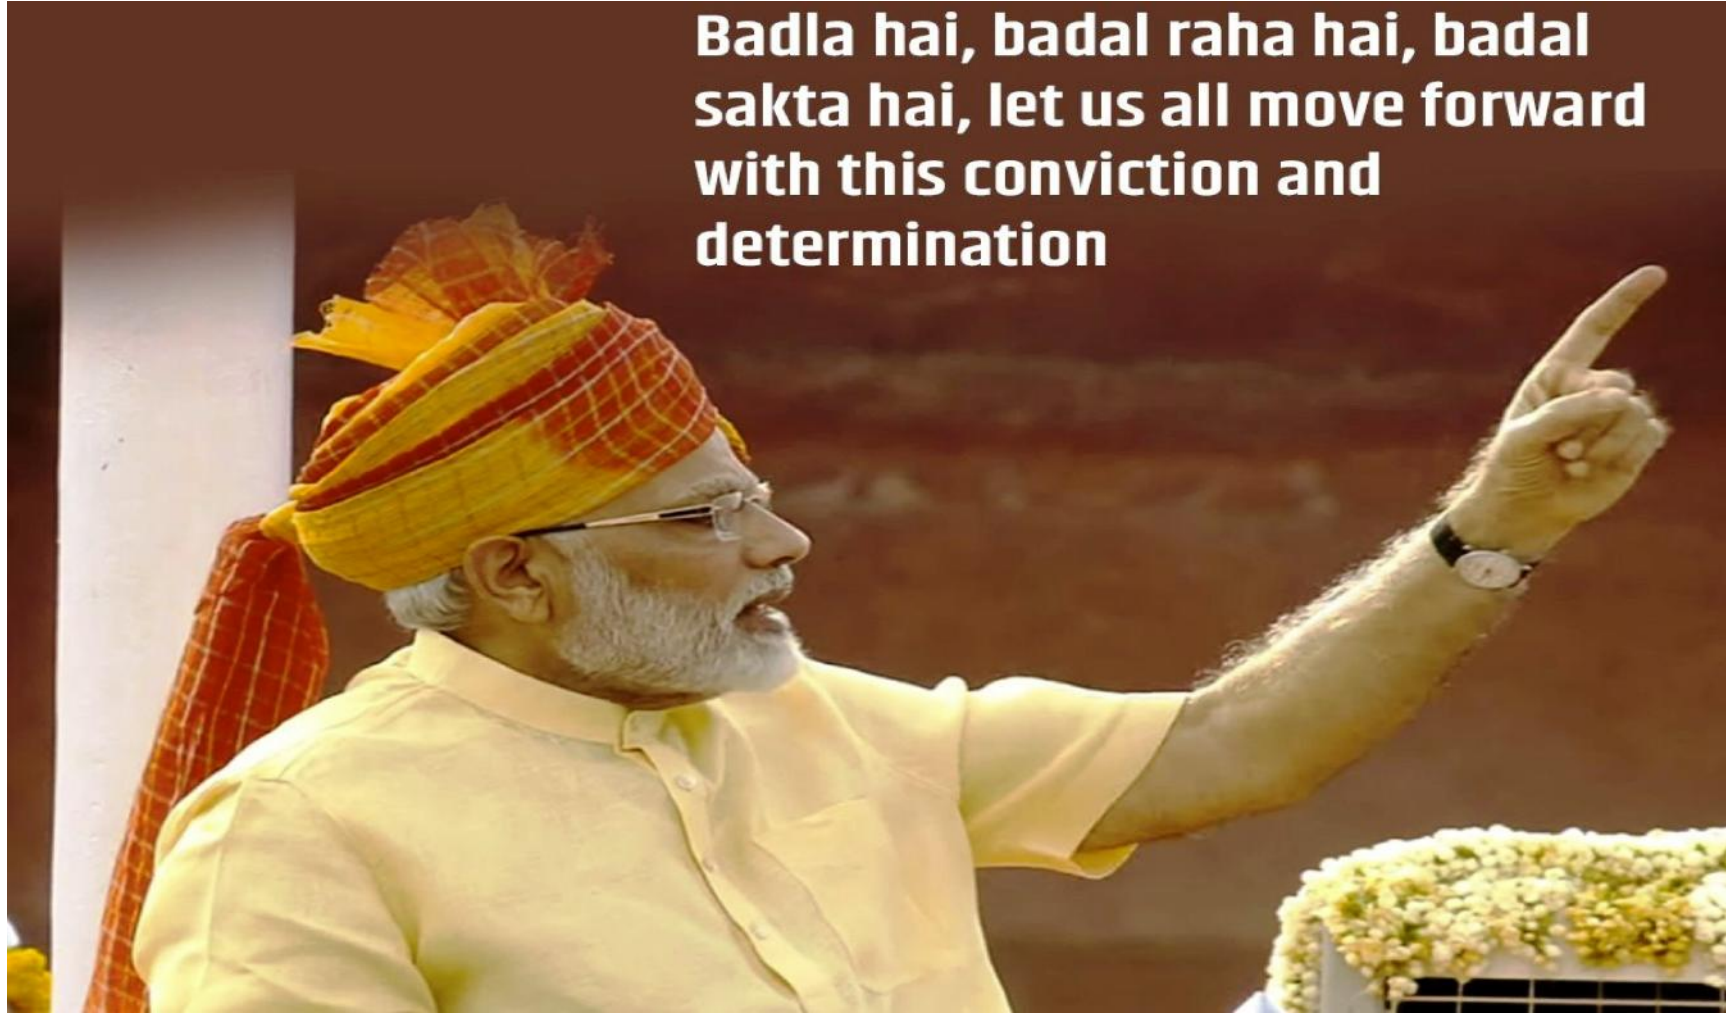

Services model for companion, sport, wild and work animal care:

All above models should be linked to a technology-based Tele Veterinary System under the supervision of trained subject matter experts.
